Header section of screen. Pages are analogous to steps in a process. When screen first displayed “Pg 1 - Header” is selected by default. Navigation from page 1 to 2 controlled via prev and next buttons in footer.

Command buttons for saving status of current step and exiting out of screen.

Header, Data and Footer sections are children of genie contentPanel div. Data section expands to accommodate page data. Header and footer remain the same size and are anchored to top and bottom respectively.

Data section of screen consisting of a list of labels and fields.

Footer section of screen. Navigation buttons control moving from one page to another in a sequential fashion. Can't go to page 3 without first going to pages 1 and 2.
